PIMARC SURVEY RECORD INDEX (PIMARC SRI)

Searchable web-hosted Survey Record Index (SRI) service gives you the SRI data you need when you need it.

OVERVIEW

Pimarc SRI is a secure, hosted web site service which lets you store your job records, plans and field notes online. This frees administrative staff from the burden of copying and faxing files for other companies. And when you're in need of SRI data, Pimarc SRI lets you quickly search the site for surveys, plans and notes, purchase what you need, and download instantly!

Features

Find SRI data fast with these features

- Map feature lets you drill down to a specific registry office
- Fast search capabilities
- Comprehensive display of all survey records of participating companies
- Instant request for additional notes or plans from survey company
- Same familiar interface as Pimarc software for convenience and ease of use
- *Registered document search pane lets users purchase registered documents without incurring a search fee
- Automatic updates of survey records from company database to Pimarc SRI

Minimum Requirements

- Client PC: 64 MB RAM. Internet Explorer 5.5 +.

What does PIMARC give you that no other hosted Survey Record Index solution can?

- GUARANTEED cost recovery within 12 months! Your costs will be recouped within 12 months guaranteed. Other solutions can take up to four years before you see payback.
- COMPLETE listing of all project records. Download complete records from every survey company. No need to send fax requests for missing documents.
- 100% revenue pass-through to you, every time your records are downloaded by a third party. Other solutions charge you credit-card processing fees with each transaction. Plus, PIMARC rewards you with a generous revenue sharing program on all search fees.
- Province-wide searches. Accurate, up to date records from across the province.
- Data back-up in triplicate. Your original survey data records remain on your server, and copies are stored with Pimarc SRI, onsite and offsite.
- New sales opportunities from public requests. Requests for old surveys are automatically routed to your company, so you can sell the plans or provide additional surveying services to the requesting party.
- Faster, more cost effective scanning and coding. Automatic coding of your survey plan is done as your projects are created. A significant time saver, compared to other solutions that require manual, one-at-a-time image coding.
- No Internet connection required to search your own company files. Without having to rely on an Internet connection, your internal searches will never be slowed down or interrupted.
- Faster, easier records purchasing process. Simply download the records you need, and you are invoiced automatically. No need to use a company credit card.
- Plus... take advantage of reduced overhead costs and tremendous return on investment with project management, time and billing and document management features of Pimarc project management software.

Five critical questions to ask when comparing survey record index solutions

1. Can we search our own company files without being connected to the Internet?
2. Scanning and coding done automatically, or one at a time?
3. Do we have to pay the full annual fees, even if all our records aren't scanned and uploaded up front?
4. Do we have control over our own back-up of all coded data, or is all back-up data located elsewhere, beyond our control?
5. Are there any situations where we will still have to spend time sending and receiving fax requests for records?
